

Card Processing for Business-to-Business or Business-to-Government Transactions

**We offer Interchange Optimization Software that can
reduce your processing costs by up to 1%**

**Designed for Businesses that Accept:
Commercial, Purchasing, and Government Cards**

How does it work?

Interchange Optimization is the utilization of specific processing habits to ensure that every transaction qualifies for the lowest rate possible. One processing habit, to obtain the best rate for B2B and B2G purchases, is giving extra details about each transaction.

Our software enhances data capture and lowers interchange rates for B2B and B2G transactions by securely and automatically capturing additional information prior to the passing of a transaction.
